Editorial Review

From the Back Cover
The primary objective of this book is to teach the architectures, design principles, and troubleshooting techniques of a LAN. This will be imparted through the presentation of a broad scope of data and computer communication standards, real-world inter-networking techniques, architectures, hardware, software, protocols, technologies and services as they relate to the design, implementation and troubleshooting of a LAN. The logical and physical design of hardware and software is not the only process involved in the design and implementation of a LAN. The latter also encompasses many other aspects including making the business case, compiling the requirements, choosing the technology, planning for capacity, selecting the vendor, and weighing all the issues before the actual design begins.

About the Author
Dhiman Deb Chowdhury, Staff Test Engineer at Bay Networks Inc. (a part of Nortel), has more than eight years experience in Multiservice Enterprise Network design and operation. He has engineered and managed large-scale Enterprise Networks involving a wide variety of transmission media, including microwave, satellite, wire pair, fiber optics, radio frequency, co-axial cable and STPs. He participated in various industry standard specifications.

Users Review

From reader reviews:

Timothy McCormack:
