DNA Replication, Recombination, and Repair: Molecular Mechanisms and Pathology From Springer

This book is a comprehensive review of the detailed molecular mechanisms of and functional crosstalk among the replication, recombination, and repair of DNA (collectively called the "3Rs") and the related processes, with special consciousness of their biological and clinical consequences. The 3Rs are fundamental molecular mechanisms for organisms to maintain and sometimes intentionally alter genetic information. DNA replication, recombination, and repair, individually, have been important subjects of molecular biology since its emergence, but we have recently become aware that the 3Rs are actually much more intimately related to one another than we used to realize. Furthermore, the 3R research fields have been growing even more interdisciplinary, with better understanding of molecular mechanisms underlying other important processes, such as chromosome structures and functions, cell cycle and checkpoints, transcriptional and epigenetic regulation, and so on. This book comprises 7 parts and 21 chapters: Part 1 (Chapters 1–3), DNA Replication; Part 2 (Chapters 4–6), DNA Recombination; Part 3 (Chapters 7–9), DNA Repair; Part 4 (Chapters 10–13), Genome Instability and Mutagenesis; Part 5 (Chapters 14–15), Chromosome Dynamics and Functions; Part 6 (Chapters 16–18), Cell Cycle and Checkpoints; Part 7 (Chapters 19–21), Interplay with Transcription and Epigenetic Regulation. This volume should attract the great interest of graduate students, postdoctoral fellows, and senior scientists in broad research fields of basic molecular biology, not only the core 3Rs, but also the various related fields (chromosome, cell cycle, transcription, epigenetics, and similar areas). Additionally, researchers in neurological sciences, developmental biology, immunology, evolutionary biology, and many other fields will find this book valuable.

Users Review

From reader reviews:

Clara Reece:

Nowadays reading books be than want or need but also work as a life style. This reading practice give you lot of advantages. Advantages you got of course the knowledge the rest of the information inside the book this improve your knowledge and information. The info you get based on what kind of book you read, if you want have more knowledge just go with education and learning books but if you want experience happy read one together with theme for entertaining such as comic or novel. The particular DNA Replication, Recombination, and Repair: Molecular Mechanisms and Pathology is kind of book which is giving the reader unpredictable experience.

Johnathan Fuller:

Reading can called thoughts hangout, why? Because if you find yourself reading a book particularly book entitled DNA Replication, Recombination, and Repair: Molecular Mechanisms and Pathology your mind will drift away trough every dimension, wandering in each aspect that maybe mysterious for but surely can become your mind friends. Imaging every single word written in a book then become one contact form conclusion and explanation that maybe you never get prior to. The DNA Replication, Recombination, and Repair: Molecular Mechanisms and Pathology giving you another experience more than blown away your thoughts but also giving you useful information for your better life in this era. So now let us present to you

the relaxing pattern is your body and mind are going to be pleased when you are finished reading through it, like winning a sport. Do you want to try this extraordinary wasting spare time activity?

Cassandra Sanderson:

Your reading 6th sense will not betray anyone, why because this DNA Replication, Recombination, and Repair: Molecular Mechanisms and Pathology guide written by well-known writer whose to say well how to make book which might be understand by anyone who all read the book. Written in good manner for you, still dripping wet every ideas and creating skill only for eliminate your personal hunger then you still uncertainty DNA Replication, Recombination, and Repair: Molecular Mechanisms and Pathology as good book but not only by the cover but also by the content. This is one e-book that can break don't ascertain book by its cover, so do you still needing yet another sixth sense to pick that!? Oh come on your reading sixth sense already told you so why you have to listening to a different sixth sense.

Ronald Folk:

What is your hobby? Have you heard that question when you got learners? We believe that that query was given by teacher on their students. Many kinds of hobby, Everyone has different hobby. And you know that little person including reading or as reading through become their hobby. You have to know that reading is very important and also book as to be the point. Book is important thing to increase you knowledge, except your teacher or lecturer. You find good news or update in relation to something by book. Amount types of books that can you choose to adopt be your object. One of them are these claims DNA Replication, Recombination, and Repair: Molecular Mechanisms and Pathology.
