Molecular Biology of Receptors and Transporters: Bacterial and Glucose Transporters: 137A (International Review of Cell and Molecular Biology)
From Academic Press

This multi-volume set within **International Review of Cytology** encompasses the recent advances in the understanding of structure-function relationships at the molecular level of receptors, transporters, and membrane proteins. Several diverse families of membrane receptors/proteins are discussed with respect to the molecular and cellular biology of their synthesis, assembly, turnover, and function. Included are such receptor superfamilies as G-proteins, immunoglobulins, ligand-gated receptors, interleukins, and tyrosine kinases as well as such transporter/protein families as pumps, ion channels, and bacterial transporters. Each section of each volume also features a "perspectives/commentary" chapter which includes comments on the recent advances and predictions on new directions. Volume 137A highlights the recent advances in bacterial and glucose transporter mechanisms.

About the Author
Kwang Jeon received his Ph.D. in cell physiology at King’s College, University of London, UK, in 1964 and taught at SUNY Buffalo and University of Tennessee. His research was concerned with the biogenesis and function of cell components in two major areas: Integration of intracellular symbionts into host cells leading to the acquisition of new cell components and cell variation; Membrane-protein recycling during endo- and exocytosis.
