Introductory Real Analysis (Dover Books on Mathematics) By A. N. Kolmogorov, S. V. Fomin

This volume in Richard Silverman's exceptional series of translations of Russian works in the mathematical science is a comprehensive, elementary introduction to real and functional analysis by two faculty members from Moscow University. It is self-contained, evenly paced, eminently readable, and readily accessible to those with adequate preparation in advanced calculus.
The first four chapters present basic concepts and introductory principles in set theory, metric spaces, topological spaces, and linear spaces. The next two chapters consider linear functionals and linear operators, with detailed discussions of continuous linear functionals, the conjugate space, the weak topology and weak convergence, generalized functions, basic concepts of linear operators, inverse and adjoint operators, and completely continuous operators. The final four chapters cover measure, integration, differentiation, and more on integration. Special attention is here given to the Lebesque integral, Fubini's theorem, and the Stieltjes integral. Each individual section — there are 37 in all — is equipped with a problem set, making a total of some 350 problems, all carefully selected and matched.
With these problems and the clear exposition, this book is useful for self-study or for the classroom — it is basic one-year course in real analysis. Dr. Silverman is a former member of the Institute of Mathematical Sciences of New York University and the Lincoln Library of M.I.T. Along with his translation, he has revised the text with numerous pedagogical and mathematical improvements and restyled the language so that it is even more readable.

Editorial Review

Users Review

From reader reviews:

David Guyton:

Introductory Real Analysis (Dover Books on Mathematics) can be one of your basic books that are good idea. Many of us recommend that straight away because this reserve has good vocabulary which could increase your knowledge in terminology, easy to understand, bit entertaining but still delivering the information. The article author giving his/her effort to put every word into pleasure arrangement in writing Introductory Real Analysis (Dover Books on Mathematics) but doesn't forget the main point, giving the reader the hottest in addition to based confirm resource data that maybe you can be certainly one of it. This great information may drawn you into brand-new stage of crucial imagining.

Christopher Patton:

In this period globalization it is important to someone to get information. The information will make anyone to understand the condition of the world. The condition of the world makes the information simpler to share. You can find a lot of personal references to get information example: internet, magazine, book, and soon. You will see that now, a lot of publisher that print many kinds of book. The actual book that recommended for you is Introductory Real Analysis (Dover Books on Mathematics) this e-book consist a lot of the information in the condition of this world now. This particular book was represented just how can the world has grown up. The language styles that writer use for explain it is easy to understand. Often the writer made some investigation when he makes this book. Here is why this book suitable all of you.

Robert Thomas:

Is it you who having spare time and then spend it whole day by means of watching television programs or just lying on the bed? Do you need something new? This Introductory Real Analysis (Dover Books on Mathematics) can be the respond to, oh how comes? A fresh book you know. You are thus out of date, spending your extra time by reading in this completely new era is common not a nerd activity. So what these guides have than the others?

Lindsay Washington:

Some people said that they feel weary when they reading a book. They are directly felt it when they get a half regions of the book. You can choose the actual book Introductory Real Analysis (Dover Books on Mathematics) to make your own reading is interesting. Your own personal skill of reading ability is developing when you like reading. Try to choose easy book to make you enjoy to study it and mingle the

impression about book and examining especially. It is to be 1st opinion for you to like to available a book and examine it. Beside that the book Introductory Real Analysis (Dover Books on Mathematics) can to be your friend when you're truly feel alone and confuse using what must you're doing of that time.
