A Short Course on Topological Insulators: Band Structure and Edge States in One and Two Dimensions (Lecture Notes in Physics) By János K. Asbóth, László Oroszlány, András Pályi Pályi

This course-based primer provides newcomers to the field with a concise introduction to some of the core topics in the emerging field of topological insulators.

The aim is to provide a basic understanding of edge states, bulk topological invariants, and of the bulk--boundary correspondence with as simple mathematical tools as possible.

The present approach uses noninteracting lattice models of topological insulators, building gradually on these to arrive from the simplest one-dimensional case (the Su-Schrieffer-Heeger model for polyacetylene) to two-dimensional time-reversal invariant topological insulators (the Bernevig-Hughes-Zhang model for HgTe). In each case the discussion of simple toy models is followed by the formulation of the general arguments regarding topological insulators.

The only prerequisite for the reader is a working knowledge in quantum mechanics, the relevant solid state physics background is provided as part of this self-contained text, which is complemented by end-of-chapter problems.

From the Back Cover
This course-based primer provides newcomers to the field with a concise introduction to some of the core topics in the emerging field of topological insulators.

The aim is to provide a basic understanding of edge states, bulk topological invariants, and of the bulk--boundary correspondence with as simple mathematical tools as possible.

The present approach uses noninteracting lattice models of topological insulators, building gradually on these to arrive from the simplest one-dimensional case (the Su-Schrieffer-Heeger model for polyacetylene) to two-dimensional time-reversal invariant topological insulators (the Bernevig-Hughes-Zhang model for HgTe). In each case the discussion of simple toy models is followed by the formulation of the general arguments regarding topological insulators.

The only prerequisite for the reader is a working knowledge in quantum mechanics, the relevant solid state physics background is provided as part of this self-contained text, which is complemented by end-of-chapter problems.

Users Review

From reader reviews:

Randy North:

Reading a guide can be one of a lot of action that everyone in the world likes. Do you like reading book so. There are a lot of reasons why people enjoyed. First reading a guide will give you a lot of new data. When you read a publication you will get new information simply because book is one of a number of ways to share the information or maybe their idea. Second, looking at a book will make a person more imaginative. When you looking at a book especially fictional works book the author will bring someone to imagine the story how the personas do it anything. Third, it is possible to share your knowledge to other people. When you read this A Short Course on Topological Insulators: Band Structure and Edge States in One and Two Dimensions (Lecture Notes in Physics), you could tells your family, friends along with soon about yours publication. Your knowledge can inspire others, make them reading a publication.

Rosalie Dietrich:

The reason why? Because this A Short Course on Topological Insulators: Band Structure and Edge States in

One and Two Dimensions (Lecture Notes in Physics) is an unordinary book that the inside of the book waiting for you to snap that but latter it will distress you with the secret the idea inside. Reading this book beside it was fantastic author who write the book in such wonderful way makes the content on the inside easier to understand, entertaining approach but still convey the meaning completely. So , it is good for you for not hesitating having this any longer or you going to regret it. This unique book will give you a lot of benefits than the other book include such as help improving your proficiency and your critical thinking approach. So , still want to hesitate having that book? If I had been you I will go to the book store hurriedly.

Rena Campbell:

The book untitled A Short Course on Topological Insulators: Band Structure and Edge States in One and Two Dimensions (Lecture Notes in Physics) contain a lot of information on it. The writer explains the girl idea with easy technique. The language is very simple to implement all the people, so do not worry, you can easy to read that. The book was authored by famous author. The author will bring you in the new period of literary works. It is easy to read this book because you can please read on your smart phone, or device, so you can read the book throughout anywhere and anytime. If you want to buy the e-book, you can open their official web-site and order it. Have a nice learn.

John Negron:

You may spend your free time you just read this book this book. This A Short Course on Topological Insulators: Band Structure and Edge States in One and Two Dimensions (Lecture Notes in Physics) is simple bringing you can read it in the park, in the beach, train and soon. If you did not have got much space to bring typically the printed book, you can buy the actual e-book. It is make you quicker to read it. You can save typically the book in your smart phone. And so there are a lot of benefits that you will get when one buys this book.
