Editorial Review

From School Library Journal
Gr 9 Up—Brown immerses readers in the complicated origins of one of the world's most popular video games, Tetris. Its creator, Alexey Pajitnov, was a computer scientist who became obsessed with how games and puzzles affected human psychology. Before long, Pajitnov became caught up in a prototype he'd designed based on a childhood game and shared it with his friends. Soon all of Moscow was consumed by what would eventually be called "the game that escaped the USSR." The art style is reminiscent of the Cyanide and Happiness comic but whimsical in tone. It also cleverly mimics the structure of Tetris itself: straightforward and engaging, without any extra bells and whistles. With the recent Nintendo release of the hit cell phone game Pokémon Go, this title is a timely explanation of the origins of the gaming world, particularly when it comes to the rivalries among various gaming companies. The story resonates and will appeal to fans of Jim Ottaviani's Feynman and Primates: The Fearless Science of Jane Goodall, Dian Fossey, and Biruté Galdikas. VERDICT This quick, thoughtful read will find an audience among teens interested in pursuing a career in video game design or those who wonder just how video games like Tetris have spread like wildfire.—Chantalle Uzan, New York Public Library
